

Alex Beleggersbank

The Challenge

Following the recent merger of Alex and BinckBank a consolidation of all their IT systems was required. As part of this exercise, they decided to implement a cost effective monitoring system for their trading platform.

Our Approach

We designed and deployed an Opsview proof of concept system in four days to demonstrate that Opsview fully met Alex' evaluation criteria. The same evaluation criteria was applied to competing technologies and was found by Alex to take at least 2 weeks to implement.

Following the successful proof of concept Alex chose Opsview as their preferred monitoring system.

Solution

The first phase of the deployment project was to monitor Alex' Development, Test and Acceptance environments. Following acceptance of these systems, Opsview was then deployed to the live trading environment.

Results

The monitoring system was designed, delivered to time and budget and fully operational in February 2009.
